Subject: PMR for HL7DFDL Nodes

Hi Glenn,

We need to open PMR to enable Monitoring on HL7 Input and Output Nodes as shown below its not available.

For HL7DFDL Input

The screenshot displays the IBM WebSphere Integration Developer interface. On the left, a palette shows various adapters and components. The main workspace shows a diagram with an 'HL7DFDLInput' node connected to 'Exception' and 'Setup' nodes. Below the workspace, the 'User Defined Properties' tab is active, showing the 'HL7DFDLInput Node Properties - HL7DFDLInput' dialog. The dialog has several sections: 'Description', 'HL7 Processing', 'Basic', 'Record Detection', and 'Retry'. The 'HL7 Processing' section includes 'Check duplicates' (checked). The 'Basic' section includes 'Report duplicates' (checked). The 'Record Detection' section includes 'Duplicate time period' (86400). The 'Retry' section includes 'Duplicate identifiers queue' (TestHL7DFDL.DUPID), 'Leading MLLP byte*' (0B), and 'Send acknowledgments' (checked).

Section	Property	Value	Checked
HL7 Processing	Check duplicates		<input checked="" type="checkbox"/>
	Report duplicates		<input checked="" type="checkbox"/>
Basic	Report duplicates		<input checked="" type="checkbox"/>
Record Detection	Duplicate time period	86400	
Retry	Duplicate identifiers queue	TestHL7DFDL.DUPID	
	Leading MLLP byte*	0B	
	Send acknowledgments		<input checked="" type="checkbox"/>

For HL7DFDL Output

Property	Description	Value
Connection details*		localhost:2222
Timeout sending data record (seconds)*		60
Leading MLLP byte*		0B
Retry limit*		5
Log retry		<input checked="" type="checkbox"/>

Hope this helps.
