

Events support for CDK:

Like the events support within the discovery connector, we are looking to deploy similar options for the community connectors and hence need this capability in the CDK to allow us to post events to the connectors.

IBM Maximo events The event is the trigger that makes your flow start working.	IBM Maximo actions The action is the task you want your flow to complete.
<ul style="list-style-type: none">Assets (mxapiasset)<ul style="list-style-type: none">New assetUpdated assetDeleted assetCompanies (mxapivendor)<ul style="list-style-type: none">New companyUpdated companyDeleted companyContracts (mxapicontract)<ul style="list-style-type: none">New contract	<ul style="list-style-type: none">Assets (mxapiasset)<ul style="list-style-type: none">Create assetRetrieve assetsUpdate assetUpdate or create assetDelete assetDownload assets as CSVReplace assetReplace or create assetAssets (mxasset)

We have created a community connector using actions and now need the support for actions to complete the full support.

Account 1

Account: Account 1  

TRIRIGA ExpressConnect actions
The action is the task you want your flow to complete.

- Auth
- Employees
 - Create a Employee record
Create a **Employee** record.
 - Get any Employee record
Returns all of the **Employee** records. It is recommended to use a query when calling this path.
 - Get a Employee record
Return a single **Employee** record identified by it's unique id. A client can also fetch linked records.
 - Delete a Employee record
Delete a **Employee** record.
 - Update an Employee record
