

Only with upload permissions, and without folder creation permissions (mkdir), we have the possibility to upload a folder structure using the "upload folder" button:

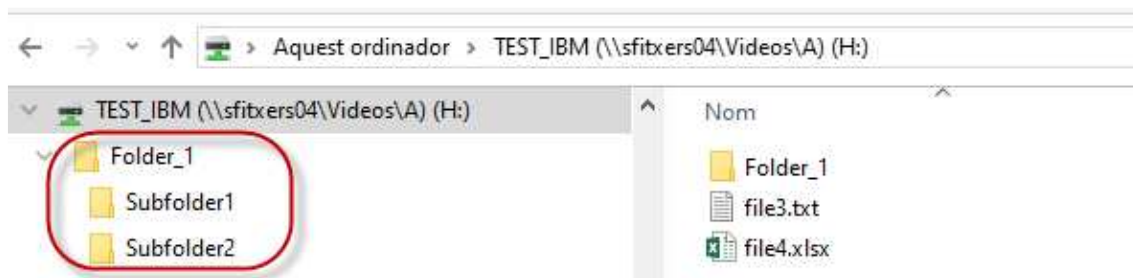

[Authorize User](#) [Authorize Group](#) [Authorize Directory Service](#)

Name	Directory	Manage	Browse	Transfer	File Operations	Notifications	Actions
Users							
Albert Farran	Local Database	<input type="checkbox"/> manage	<input checked="" type="checkbox"/> browse	<input type="checkbox"/> download	<input checked="" type="checkbox"/> upload	<input type="checkbox"/> mkdir <input type="checkbox"/> delete <input type="checkbox"/> rename	<input type="checkbox"/> content availability Remove

TEST_IBM

Name: Search sub-folders [Advanced](#)

<input type="checkbox"/>	Name
<input type="checkbox"/>	Folder_1
<input type="checkbox"/>	file3.txt
<input type="checkbox"/>	file4.xlsx

We think this "Upload Folder" button should only appear if you have both "Mkdir" and "Upload" permission assigned.
